## PROFESSIONAL SUMMARY

Junior DevOps Engineer and Computer Science graduate (2026), currently a DevOps Intern at Elevate Labs, with a strong foundation in Linux, networking, cloud computing, Docker, Kubernetes, CI/CD and AWS. Built hands-on projects using Jenkins, GitHub Actions, Terraform, Ansible, Prometheus and Grafana, covering Docker image builds, Kubernetes deployments with rollout verification and rollback, Trivy vulnerability scanning, monitoring and alerting, and log analysis. Comfortable with Bash and Python scripting, troubleshooting and least-privilege IAM.

## TECHNICAL SKILLS

**Linux and Scripting:** Linux (Ubuntu, Amazon Linux), System Administration, Troubleshooting, Log Analysis, Bash, Python, JavaScript

**Cloud Computing:** Compute, Storage, Networking and Security Fundamentals on AWS and GCP

**AWS:** EC2, VPC, IAM, S3, CloudWatch, ECR, EBS, ELB, RDS, Lambda, SNS, Systems Manager (SSM), Security Groups

**GCP:** Compute Engine, VPC, IAM, Cloud NAT, Cloud Storage, Secret Manager, IAP, Cloud Run, Artifact Registry

**Docker:** Containerization, Dockerfiles (multi-stage builds), Image Management, Docker Compose, Container Security

**Kubernetes:** k3s, kubectl, Deployments, Services, Ingress, HPA, Probes, Rollouts and Rollback, Basic Troubleshooting

**CI/CD:** Jenkins (declarative pipelines), GitHub Actions, CI/CD Pipelines, Automated Testing

**Infrastructure as Code:** Terraform (variables, outputs, state management), Ansible (playbooks, roles)

**Monitoring and Logging:** Prometheus, Grafana, CloudWatch, Nagios Core, Alert Rules, Log Analysis

**Networking:** TCP/IP, DNS, HTTP/HTTPS, Firewalls, Load Balancing (ELB), VPC, Subnets, Route Tables, IP Addressing

**Version Control and Security:** Git, GitHub, Trivy, Vulnerability Scanning, IAM, Least-Privilege Access, Secret Management

**Application Stack and Databases:** Node.js, Express.js, Flask, React, Vite, Nginx, MySQL, SQLite

## PROFESSIONAL EXPERIENCE

**DevOps Intern** | Elevate Labs *October 2026 - Present*

- Completed hands-on DevOps projects focused on CI/CD automation, containerization and Infrastructure as Code (IaC).
- Built automated CI/CD workflows with Git, GitHub Actions and Jenkins, and deployed containerized applications using Docker.
- Provisioned Docker infrastructure using Terraform and worked with Linux and Google Cloud Platform (GCP).

## PROJECTS

### Shipyard: AWS Kubernetes and CI/CD Platform

github.com/Jafar19Khan/shipyard

- Provisioned AWS infrastructure using Terraform and Ansible and configured a k3s Kubernetes cluster.
- Built a Jenkins CI/CD pipeline for testing, Docker builds, Trivy scanning, ECR publishing, Kubernetes deployments, rollout verification and rollback.
- Integrated Prometheus and Grafana for infrastructure monitoring, dashboards and alerting.

**Technologies:** AWS, Terraform, Ansible, Jenkins, Docker, Kubernetes (k3s), Trivy, Prometheus, Grafana, Node.js

### VPCraft: AWS Cloud Infrastructure and CI Platform
github.com/Jafar19Khan/vpcraft-cloud-platform

- Provisioned AWS networking and compute resources using Terraform, including VPC, subnets, route tables, security groups and EC2.
- Applied security controls including SSM-based administration, IMDSv2, encrypted EBS volumes and least-privilege IAM.
- Containerized a Flask application using Docker Compose and Nginx with health checks, hardened containers and API rate limiting.
- Automated unit tests, container smoke tests and Terraform validation using GitHub Actions.

**Technologies:** AWS, Terraform, Docker, Docker Compose, Nginx, Python, Flask, Gunicorn, SQLite, GitHub Actions, Linux

### AIOps: Automated Log Monitoring and Incident Remediation
github.com/Jafar19Khan/aiops-log-monitoring

- Developed a Python-based log monitoring tool to parse logs, detect anomalies and group related events into incidents.
- Implemented threshold-based detection and Isolation Forest for anomaly detection, with incident summaries and root-cause hints.
- Added controlled remediation using validated, allow-listed commands, with dry-run enabled by default.
- Integrated CPU, memory and disk monitoring, trend-based threshold forecasting, Docker support and GitHub Actions CI.

**Technologies:** Python, Pandas, NumPy, Scikit-learn, Isolation Forest, Psutil, PyYAML, Docker, GitHub Actions, Linux

### CareBridge: Three-Tier Healthcare Platform on GCP
github.com/Jafar19Khan/carebridge-gcp-platform

- Designed a three-tier GCP architecture with network segmentation, firewall controls and private database connectivity.
- Automated infrastructure provisioning with Terraform and implemented IAM, service accounts, IAP/OS Login, Secret Manager and Cloud NAT.
- Configured GitHub Actions CI workflows for testing, frontend builds, security checks, Docker image builds and Terraform validation.
- Configured Cloud Storage backup workflows with a 14-day retention policy.

**Technologies:** GCP, Terraform, Docker, GitHub Actions, React, Vite, Node.js, Express.js, MySQL, Nginx

## CERTIFICATIONS

**Certified DevOps Associate** - Cloud Train, 7 Day DevOps Workshop | October 2026
**Multi-Cloud + DevOps with AI Bootcamp** - Cloud DevOps Hub, 55 Day Bootcamp | April 2026 | ID: Q6WUNTPX

## EDUCATION

**Bachelor of Science in Computer Science**, University of Mumbai | 2023 - 2026
**HSC**, Navjeevan High School and Junior College, Rajapur | 2021 - 2023
**SSC**, Navjeevan High School and Junior College, Rajapur | 2019 - 2020

## LANGUAGES

English, Hindi, Marathi
